Important information regarding this form

This form has to be filled out for each building if it's a whole complex, i.e. a structural unit from the bottom to the top that is physically separated from the others. This form is divided into 4 sections defined by the shaded boxes. In some sections, the square boxes () indicate the possibility of multiple answers; round boxes () instead allow only a single choice. For boxes () it is necessary to write in block letters, starting from the left if it's a text and from right if they are numbers. Before writing down the characteristics of the building, the compiler has to write his name and his education level in block letters.

Section 1: Identification of the Building

In the section "Identification of the Building", the location and name of the building have to be filled in, together with the geographical coordinates of the main entrance. These coordinates have to be written in the "Lat." and "Long." boxes (WGS 84 System). Lastly, please indicate whether the building is isolated, internal, end, or corner.

Section 2: Description of the Building

In the section "Description of the Building", the total number of floors from the foundation to the attic have to be given; the latter has to be included only if it is usable. Also, the number of basements have to be specified. In "Age", the compiler can choose a maximum of two options: the first is always the age of the building while the second is the possible year in which any actions were carried out on structure. In "Use", multiple choices are possible: the types of uses coexisting in the building and the number of units for them. In "% of Use", the current state of use has to be specified. Lastly, please specify the number of occupants (see example below) and the type of property.

Example for the definition of number of occupants

	100	10	1
0	0	0	0
1	1	1	1
2	2	2	2
3	X		3
4	4	4	4
X		5	5
6	6	6	6
7	7	7	X
8	8	8	8
9	9	9	9

The result of the number of occupants is **537** .

Section 3: Main Material of the Building's Vertical Structure

The section "Main Material of the Building's Vertical Structure" is for specifying the material of the building (masonry or reinforced concrete). If the structure is in reinforced concrete, more details should be specified: if it is composed totally by walls or if there is partial or total absence of them. In the latter case, it is necessary to specify the corresponding floors.

Building with no walls at one floor

Building with some wall at one floor

Building with walls

Section 4: Notes

Notes can be added in section 4, such as describing the building's features in more detail that cannot be captured in the previous sections of this form. Filling out this field is optional.
